NOTICE OF CONSTRUCTION

This letter contains important information about a construction project near your home or business. Please read carefully. For more information, visit www.questargas.com/FL19.

Dear Resident or Business Owner:

For the past year, Questar Gas has been working to replace about 18 miles of underground natural gas pipeline known as Feeder Line 19 that runs from South Weber north to Harrisville. This letter is to inform you about work we will be doing over the next several weeks on a section of pipe near your home or business. The section in question is located in Roy City beneath 1900 West Street (state highway 126) between Riverdale Road and Hinckley Drive. We will be replacing the existing pipe with new, stronger pipe. This work will enable us to continue providing safe, reliable service while keeping pace with customer growth and increasing demand for natural gas.

Crews have already begun the process of locating existing buried utility lines in preparation for major construction on 1900 West. This initial work will take about three weeks to complete. Weather permitting, major construction to install new pipe, perform final cleanup and pave over the new pipe should be finished by mid-August.

Questar Gas and its contractor, Northern Pipeline, are committed to completing this work quickly, safely and with as little inconvenience to local residents as possible. Every effort will be made to keep traffic flowing in both directions at all times. However, in order to provide room for crews and equipment, lane restrictions (in intersections and in northbound lanes) will be necessary, and temporary road closures may occur. Access to businesses and driveways along 1900 West will be maintained. No interruption to residents' natural gas service is anticipated during this project.

Public safety is of paramount importance to us. You can do your part to ensure that construction proceeds safely and on schedule by driving carefully in construction zones and keeping children away from open trenches and construction activity. We appreciate your patience.
